Intro and Context

2

Individual and Group activities

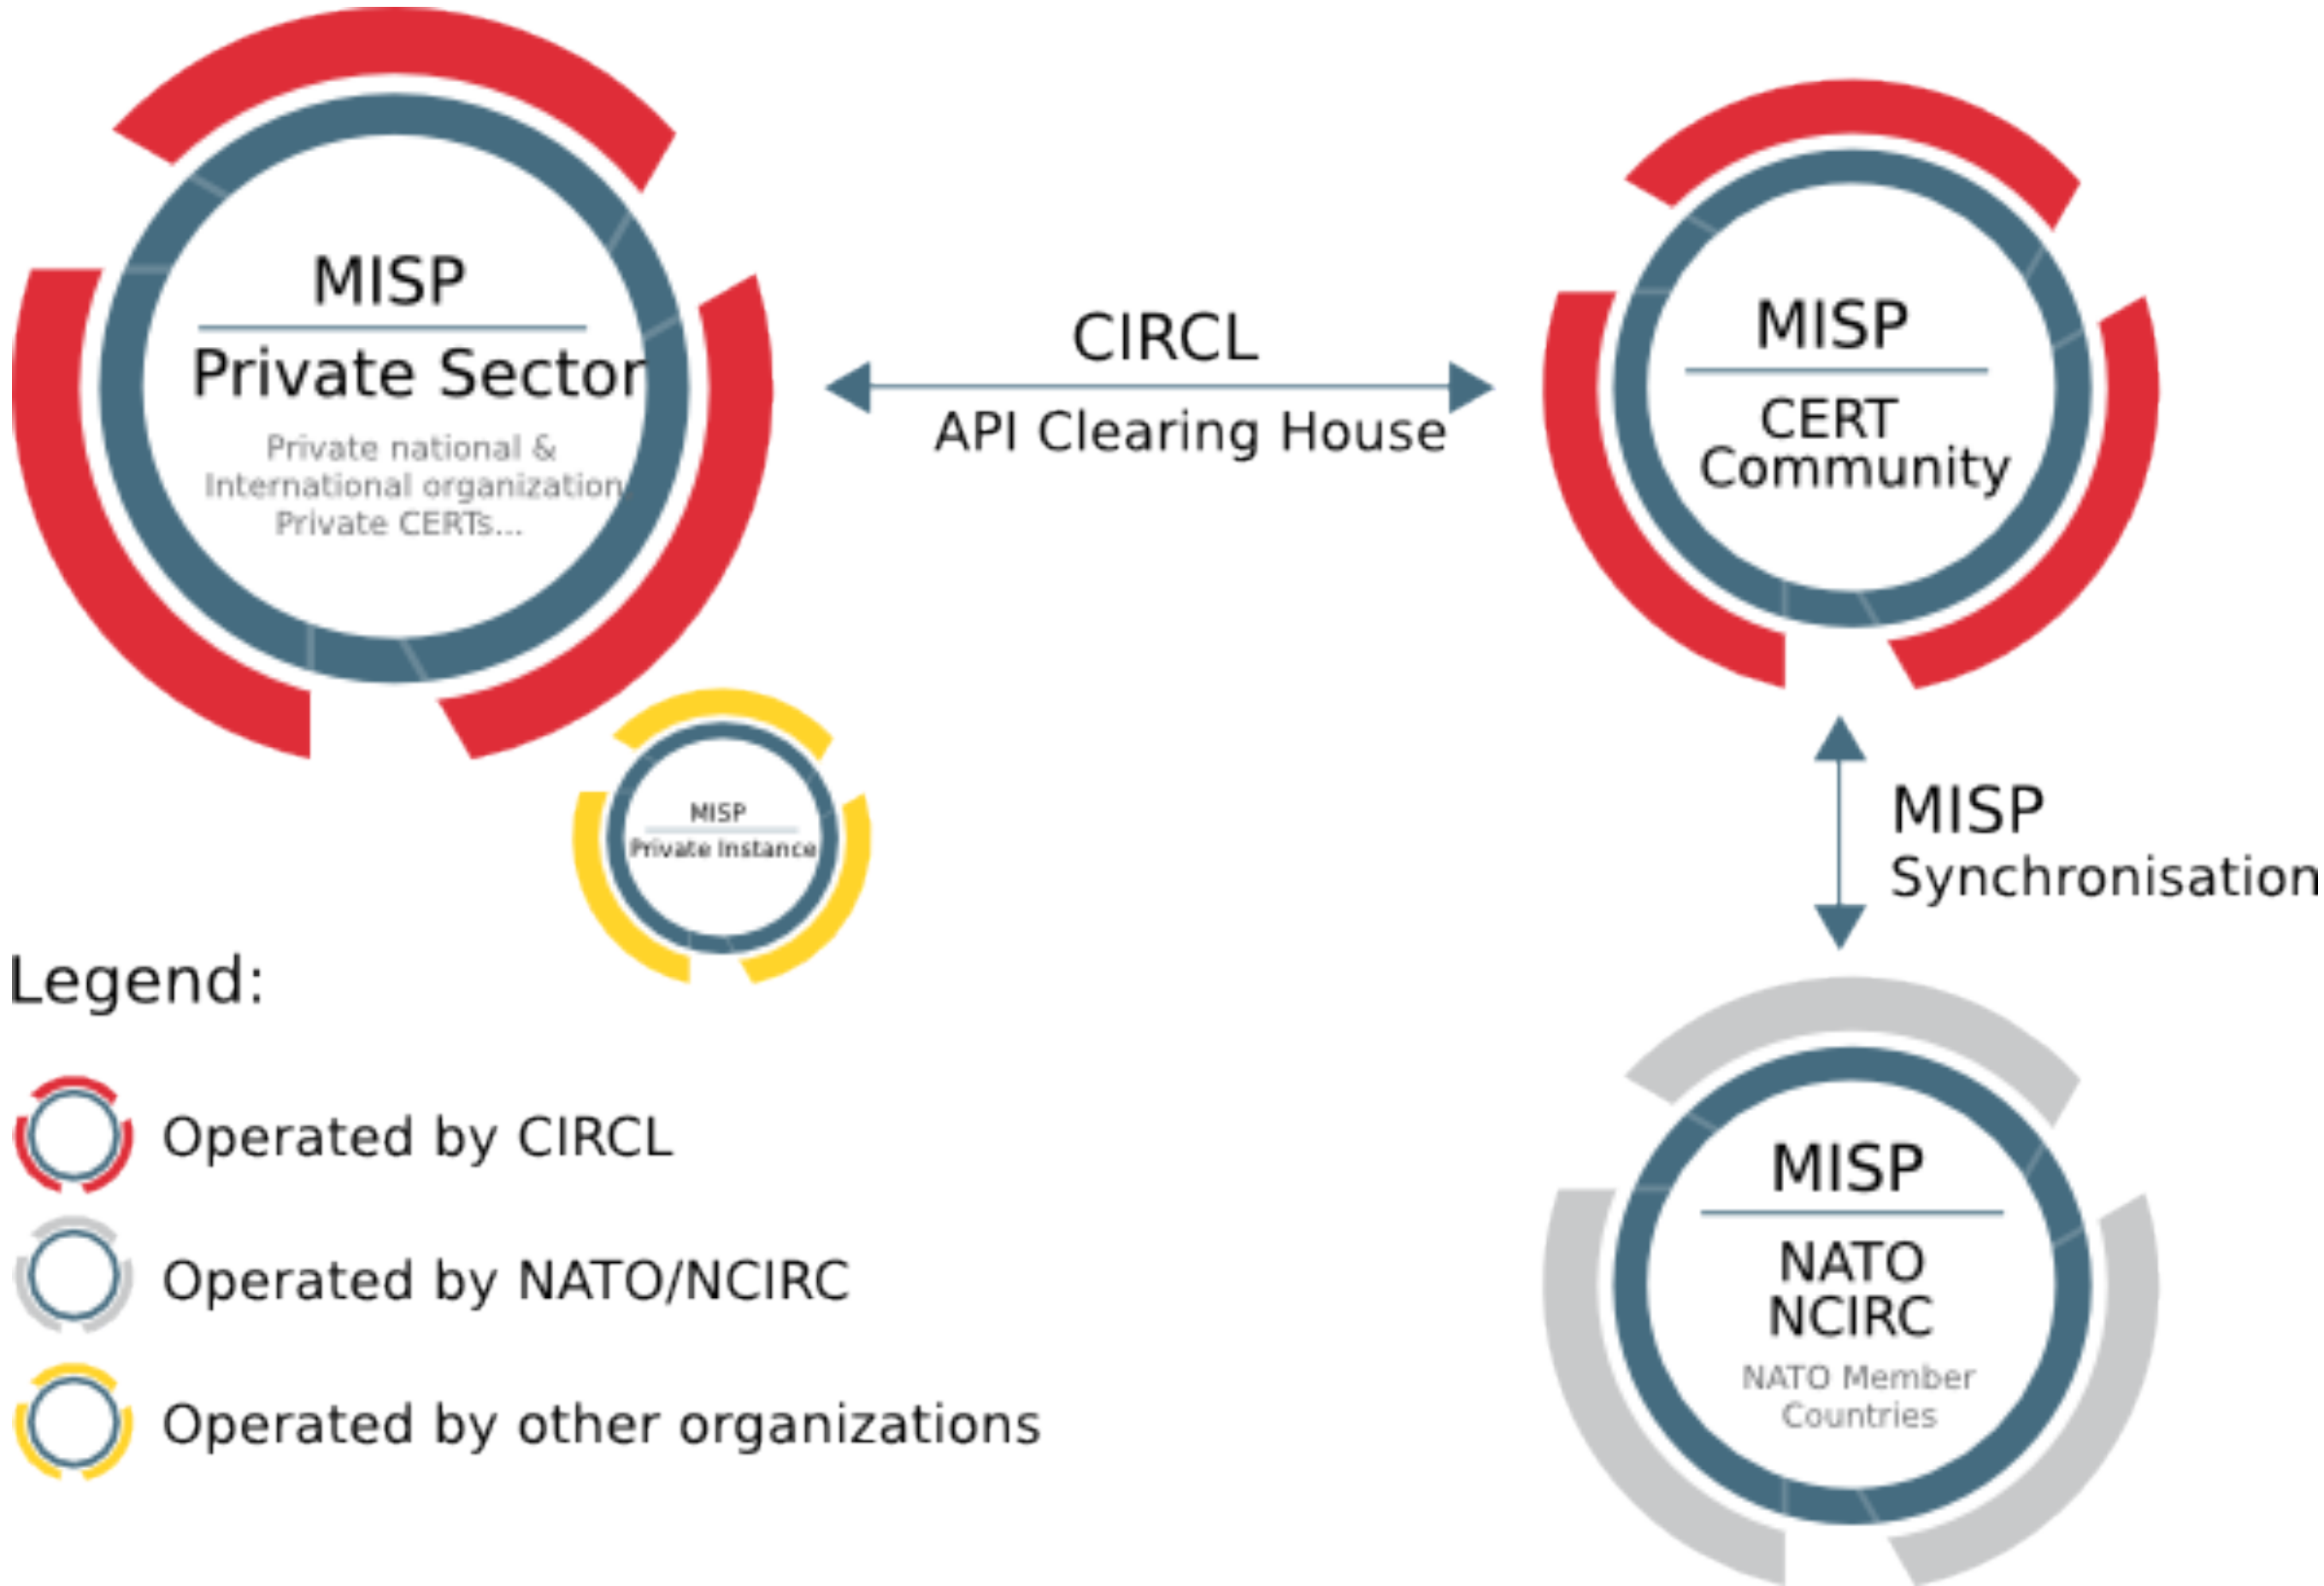

3

Discussion

How does MISP work?

How is information shared in MISP?

Who uses MISP?

Different types of users, different organizations, different purposes:

- ▶ Malware reversers
- ▶ Security analysts
- ▶ Intelligence analysts
- ▶ Law-enforcement
- ▶ Risk analysis teams
- ▶ Fraud analysts

Research Motivation

- **Technically-advanced information sharing platform**
- **Diverse set of security information workers with distinct needs and objectives**
- **Sharing difficulties**
 - a matter of social interactions (e.g. trust), legal restrictions, practical restrictions
- **UX design and human motivation paramount to the success of a threat information sharing platform (Sander et Hailpern, 2015)**

Research Question

How do MIS users evaluate the usability and user experience of the platform i.e. how do they perceive both the pragmatic and hedonic qualities of the system?

Take part in the MISP User Experience Survey

<https://misp-project.org/ux-survey>

MISP User Experience Survey

The purpose of this survey is to assess the user experience of the MISP Open Source Threat Intelligence Platform (<https://www.misp-project.org/>) and learn more about the needs of its users.

This survey consists of two parts:

- The first is a standardised questionnaire used to measure the user experience of interactive products.
- The second is a demographics questionnaire used to assess the characteristics of the survey respondents.

The estimated completion time for the whole survey is 5-10 minutes.

Thank you!
